## INTRODUCTION

During the fall of 2006, Indiana students in Grades 3 through 10 participated in the administration of *ISTEP+*. The test administered in Grade 10 is the Graduation Qualifying Exam (GQE). This test is also given to other students attempting to qualify for graduation. The GQE Mathematics assessment for *ISTEP+* Fall 2006 consisted of two parts: (1) a multiple-choice section and (2) an applied skills section. For the fall testing, the multiple-choice section, which consisted of multiple-choice and gridded-response questions, was machine-scored. The applied skills section, which consisted of open-ended questions, was hand-scored.

The results of both the multiple-choice section and the applied skills section were returned to the schools in early December 2006. Copies of student responses in the applied skills section were also returned to the schools in early December 2006. It is the expectation of the Indiana Department of Education that schools will take this opportunity to invite students and parents to sit down with teachers to discuss the results. To support this endeavor, the Indiana Department of Education has prepared the following *Teacher's Scoring Guide*. The purpose of this guide is to help teachers

- understand the methods used to score the *ISTEP+* Fall 2006 Applied Skills Assessment, and
- discuss and interpret these results with students and parents.

In order to use this guide effectively, you will also need the Student Report and a copy of the student's work.

For the GQE, there are two scoring guides: English/Language Arts and Mathematics. In this Mathematics guide, you will find

- an introduction,
- a list of the Mathematics Grade 8 and the Algebra I Indiana Academic Standards,\*
- rubrics (scoring rules) used to score the open-ended questions,
- anchor papers that are actual examples of student work (transcribed in this guide for clarity and ease of reading), and
- descriptions of the ways in which the response meets the rubric criteria for each of the score points.

When you review the contents of the scoring guide, keep in mind that this guide is an overview. If you have questions, write via e-mail ([istep@doe.state.in.us](mailto:istep@doe.state.in.us)) or call the Indiana Department of Education at (317) 232-9050.

\* The Mathematics standards assessed in the GQE are a combination of the *ISTEP+* Grade 8 Mathematics and the Algebra I Standards that were adopted in September 2000.

## INTRODUCTION TO THE MATHEMATICS APPLIED SKILLS ASSESSMENT

The Applied Skills Assessment that students took this past fall in the GQE allowed the students to demonstrate their understanding of Mathematics in a variety of ways, such as using a ruler, explaining a solution, drawing a picture, or interpreting a table or graph.

### STRUCTURE

The open-ended questions for the GQE Mathematics assessment were divided into two tests, Test 1 and Test 2. Each test consisted of eight open-ended questions. Students were permitted to use calculators on Test 2 but **not** on Test 1.

### SCORING

Each open-ended question was scored according to its own rubric. A rubric is a description of student performance that clearly articulates the requirements for each of the score points. Scoring rubrics are essential because they ensure that all papers are scored objectively. Each rubric for the Mathematics portion of this administration of the *ISTEP+* Fall 2006 GQE assessment has a maximum possible score of two or three score points.

**NOTE:** Images of the questions and student work have been reduced to fit the format of this guide.

Rubrics are established prior to testing to describe the performance criteria for each score point. The performance criteria determine the number of score points possible for each question. This process ensures that all responses are judged objectively.

1. Students should not be penalized for omitting

- degree symbols
- dollar signs (\$) or cent signs (¢)
- zeros for place holders; for example, either 0.75 or .750 could be used
- labels for word problems; for example, *miles*

**NOTE:** Students WILL be penalized for use of incorrect labels.

2. Students should not be penalized for

- spelling or grammar errors
- using abbreviations; for example, *ft* or *feet* would be acceptable

3. Students should be given credit for

- entries in the workspace that indicate understanding of a complete process even if the response on the answer line is incorrect (i.e., the student would receive partial credit for questions with rubrics that allow for scoring the work).
- answers not written on the answer line; for example, an answer could be given in the workspace or in the explanation (however, in some cases, because of the multiple calculations in the workspace, placement of an answer on the answer line is necessary to determine which result the student intended). Students WILL be penalized for incorrect answers written on the answer line even if the correct answer appears in the workspace.

### **CONDITION CODES**

If a response is unscorable, it is assigned one of the following condition codes:

A Blank/No response/Refusal

B Illegible

C Written predominantly in a language other than English

D Insufficient response/Copied from text

## MATHEMATICS GRADE 8

### INDIANA ACADEMIC STANDARDS

#### ☐ **Number Sense**

Students know the properties of rational and irrational numbers expressed in a variety of forms. They understand and use exponents, powers, and roots.

#### ☐ **Computation**

Students compute with rational numbers expressed in a variety of forms. They solve problems involving ratios, proportions, and percentages.

#### ☐ **Algebra and Functions**

See the Algebra I Standards on the next page.

#### ☐ **Geometry**

Students deepen their understanding of plane and solid geometric shapes and properties by constructing shapes that meet given conditions, by identifying attributes of shapes, and by applying geometric concepts to solve problems.

#### ☐ **Measurement**

Students convert between units of measure and use rates and scale factors to solve problems. They compute the perimeter, area, and volume of geometric objects. They investigate how perimeter, area, and volume are affected by changes of scale.

#### ☐ **Data Analysis and Probability**

Students collect, organize, represent, and interpret relationships in data sets that have one or more variables. They determine probabilities and use them to make predictions about events.

#### ☐ **Problem Solving**

Students make decisions about how to approach problems and communicate their ideas. Students use strategies, skills, and concepts in finding and communicating solutions to problems. Students determine when a solution is complete and reasonable, and move beyond a particular problem by generalizing to other situations.

## ALGEBRA I

### INDIANA ACADEMIC STANDARDS

- ☐ **Operations with Real Numbers**  
Students simplify and compare expressions. They use rational exponents and simplify square roots.
- ☐ **Linear Equations and Inequalities**  
Students solve linear equations and inequalities in one variable. They solve word problems that involve linear equations, inequalities, or formulas.
- ☐ **Relations and Functions**  
Students sketch and interpret graphs representing given situations. They understand the concept of a function and analyze the graphs of functions.
- ☐ **Graphing Linear Equations and Inequalities**  
Students graph linear equations and inequalities in two variables. They write equations of lines and find and use the slope and y-intercept of lines. They use linear equations to model real data.
- ☐ **Pairs of Linear Equations and Inequalities**  
Students solve pairs of linear equations using graphs and using algebra. They solve pairs of linear inequalities using graphs. They solve word problems involving pairs of linear equations.
- ☐ **Polynomials**  
Students add, subtract, multiply, and divide polynomials. They factor quadratics.
- ☐ **Algebraic Fractions**  
Students simplify algebraic ratios and solve algebraic proportions.
- ☐ **Quadratic, Cubic, and Radical Equations**  
Students graph and solve quadratic and radical equations. They graph cubic equations.
- ☐ **Mathematical Reasoning and Problem Solving**  
Students use a variety of strategies to solve problems. Students develop and evaluate mathematical arguments and proofs.

Problem Solving is identified as a Process Skill in the Indiana Academic Standards. To ensure that the *ISTEP+* questions that assess this Process Skill are grade-appropriate and that the questions use skills that are contained in the standards, these questions are developed by including at least two different indicators from Content Skills in addition to the indicator from the Process Skill. Some of the Content Standards included in the Content Skills are Computation, Geometry, and Algebra. The additional indicators may be from the same or different Content Skills.

**NOTE:** For the Process Skill questions, score points are awarded **only** for the Process Skill, not for the Content Skill associated with the question.

The Content Skills used for each of the Process Skill questions in the GQE Applied Skills Assessment are shown in the following chart.

### PROCESS SKILL QUESTIONS

Question	Process Skills (score points awarded)	Content Skills (score points <b>not</b> awarded) <i>Item may map to more than one indicator in a standard.</i>
<b>Test 1</b>		
4	Problem Solving	Algebra and Functions, Geometry
6	Problem Solving	Algebra and Functions, Measurement
<b>Test 2</b>		
3	Problem Solving	Computation, Data Analysis and Probability
4	Problem Solving	Geometry, Measurement
7	Problem Solving	Measurement, Measurement

## Test 1—Question 1: Algebra and Functions

- 1** Solve the pair of equations shown below.

$$3x + 3y = 6$$

$$5x + y = 10$$

**Show All Work**

**Answer**  $x = \underline{\hspace{2cm}}, y = \underline{\hspace{2cm}}$

### Exemplary Response:

- $x = 2, y = 0$

Sample Process:

- $$\begin{aligned} y &= -5x + 10 \\ 3x + 3(-5x + 10) &= 6 \\ 3x - 15x + 30 &= 6 \\ -12x &= -24 \\ x &= 2 \end{aligned}$$

AND

- $$\begin{aligned} 3(2) + 3y &= 6 \\ 6 + 3y &= 6 \\ 3y &= 0 \\ y &= 0 \end{aligned}$$

OR

- Other valid process

### Rubric:

- |                 |  |
|-----------------|--|
| <b>2 points</b> | Exemplary response                             |
| <b>1 point</b>  | Correct complete process; error in computation |
| <b>0 points</b> | Other  |

### Test 1—Question 1 Score Point 2

This response matches the exemplary response contained in the rubric. The student shows the correct answer of 2 and 0. A correct complete process is shown, but not required. The response receives a Score Point 2.

SCORE POINT 2	
<p><b>1</b> Solve the pair of equations shown below.</p> $\begin{array}{r} 3x + 3y = 6 \\ 5x + y = 10 \end{array}$ <p><b>Show All Work</b></p> $\begin{array}{r} 3x + 3y = 6 \xrightarrow{\text{m}5} 15x + 15y = 30 \\ 5x + y = 10 \xrightarrow{\text{m}-3} -15x - 3y = -30 \\ \hline 12y = 0 \\ 12y \quad 12 \\ \hline y = 0 \end{array}$ <p><b>Answer</b> <math>x = \underline{\quad 2 \quad}, y = \underline{\quad 0 \quad}</math></p>	$\begin{array}{r} 3x + 3y = 6 \\ \xrightarrow{\text{m}-3} -15x + 3y = -30 \\ \hline -12x \quad = -24 \\ -12x \quad -12 \\ \hline x = 2 \end{array}$

### Test 1—Question 1 Score Point 1

This response shows a correct complete process, but a computational error is made when the student calculates 6 plus -30 and gets -36. This error results in an incorrect answer of 3 and -5. Therefore, this response receives a Score Point 1.

SCORE POINT 1	
<p><b>1</b> Solve the pair of equations shown below.</p> $\begin{array}{r} 3x + 3y = 6 \\ 5x + y = 10 \end{array}$ <p><b>Show All Work</b></p> $\begin{array}{r} 3x + 3y = 6 \\ 5x + y = 10 \\ \quad \searrow y = -5x + 10 \\ 3x + 3(-5x + 10) \\ 3x - 15x + 30 = 6 \\ -12x + 30 = 6 \\ \quad -30 \quad -30 \\ -12x \quad = -36 \end{array}$ <p><b>Answer</b> <math>x = \underline{\quad 3 \quad}, y = \underline{\quad -5 \quad}</math></p>	$\begin{array}{r} y = -5(3) + 10 \\ -15 + 10 = -5 \end{array}$

**SCORE POINT 0**

- 1** Solve the pair of equations shown below.

$$\begin{aligned}3x + 3y &= 6 \\5x + y &= 10\end{aligned}$$

**Show All Work**

$$\begin{aligned}3y &= -3x + 6 \\y &= -5x + 10\end{aligned}$$

$$3x + 3(-5x + 10) = 6$$

$$3x - 15x + 10 = 6$$

$$-12x = -4$$

$$x = \frac{1}{3}$$

$$y = -5\left(\frac{1}{3}\right) + 10 \quad -\frac{5}{1} \cdot \frac{1}{3}$$

$$y = -\frac{5}{3} + 10$$

$$y = -1\frac{1}{3} + 10$$

$$y = 9\frac{2}{3}$$

**Answer**  $x = \underline{\frac{1}{3}}, y = \underline{9\frac{2}{3}}$

**Test 1—Question 1  
Score Point 0**

This response shows an incorrect process resulting in an incorrect answer.

The student does not distribute correctly in going from the step  $3x + 3(-5x + 10) = 6$  to the next step. The student multiplies 3 and  $-5x$  correctly, but does not multiply 3 and 10. Therefore, this response receives a Score Point 0.

## Test 1—Question 2: Algebra and Functions

- 2** Marcy spent \$100 on Saturday. She spent the money on clothes, dinner, and a \$12 gift for her mother. She spent three times as much on clothes as she did on dinner.

On the line below, write an equation in one variable that can be used to determine how much money,  $d$ , Marcy spent on dinner.

Equation \_\_\_\_\_

Now solve the equation you wrote to determine how much Marcy spent on dinner.

Answer \$ \_\_\_\_\_

### Exemplary Response:

- $4d + 12 = 100$

OR

- $d + 3d + 12 = 100$

OR

- Other valid equation

AND

- \$22

### Rubric:

**2 points** Exemplary response

**1 point** One correct component

OR

Correct answer based on incorrect equation

**0 points** Other

## SCORE POINT 2

- 2** Marcy spent \$100 on Saturday. She spent the money on clothes, dinner, and a \$12 gift for her mother. She spent three times as much on clothes as she did on dinner.

On the line below, write an equation in one variable that can be used to determine how much money,  $d$ , Marcy spent on dinner.

**Equation**  $d + 3d + 12 = 100$

Now solve the equation you wrote to determine how much Marcy spent on dinner.

**Answer** \$ 22.00

$$d + 3d + 12 = 100$$

$$\begin{array}{r} 4d = 88 \\ \hline 4 \quad 4 \end{array}$$

$$d = 22$$

$$\begin{array}{r} 09 \\ 106 \\ - 12 \\ \hline 88 \end{array}$$

## Test 1—Question 2 Score Point 2

This response matches the exemplary response contained in the rubric. The student shows a correct equation and a correct answer of \$22. The response receives a Score Point 2.

**Test 1—Question 2**  
**Score Point 1**

This response shows an incorrect equation for the given situation. However, the student correctly solves the incorrect equation. Therefore, this response receives a Score Point 1.

**SCORE POINT 1**

- 2** Marcy spent \$100 on Saturday. She spent the money on clothes, dinner, and a \$12 gift for her mother. She spent three times as much on clothes as she did on dinner.

On the line below, write an equation in one variable that can be used to determine how much money,  $d$ , Marcy spent on dinner.

**Equation** 100 = 3d + 12

Now solve the equation you wrote to determine how much Marcy spent on dinner.

**Answer \$** 29.33

$$\begin{array}{r} 29.33 \\ 3 \overline{)88} \\ \underline{6} \\ 28 \\ \underline{27} \\ 10 \end{array}$$

$$\begin{array}{r} 1 \\ 26 \\ \times 3 \\ \hline 78 \end{array}$$

$$\begin{aligned} 100 &= 3d + 12 \\ 88 &= 3d \\ d &= \end{aligned}$$

**Test 1—Question 2**  
**Score Point 0**

This response shows an expression instead of an equation and an incorrect answer of \$26.40. Therefore, this response receives a Score Point 0.

**SCORE POINT 0**

- 2** Marcy spent \$100 on Saturday. She spent the money on clothes, dinner, and a \$12 gift for her mother. She spent three times as much on clothes as she did on dinner.

On the line below, write an equation in one variable that can be used to determine how much money,  $d$ , Marcy spent on dinner.

**Equation** 100 - 12 · 3

Now solve the equation you wrote to determine how much Marcy spent on dinner.

**Answer \$** 26.4

### Test 1—Question 3: Algebra and Functions

- 3** What is an equation of the line shown on the coordinate plane below?

**Show All Work**

**Equation** \_\_\_\_\_

**Exemplary Response:**

- $y = -2x + 6$

OR

- Other valid equation

Sample Process:

- $$m = \frac{y_2 - y_1}{x_2 - x_1}$$
$$= \frac{4 - 2}{1 - 2}$$
$$= -2$$

Look at graph to determine y-intercept of 6

$$y = -2x + 6$$

OR

- Other valid process

**Rubric:**

**2 points** Exemplary response

**1 point** Correct complete process; error in computation

OR

Equation with either correct slope or correct y-intercept

**0 points** Other

### SCORE POINT 2

- 3** What is an equation of the line shown on the coordinate plane below?

**Show All Work**

$$y = -2x + 6$$

(1,4) (2,2)

$$\frac{2 - 4}{2 - 1} = \frac{-2}{1} = m = -2$$

$$y\text{-int} = 6 = b$$

Equation  $y = -2x + 6$

### Test 1—Question 3 Score Point 2

This response matches the exemplary response contained in the rubric. The student shows a correct equation. A correct complete process is shown, but not required. The response receives a Score Point 2.

**Test 1—Question 3**  
**Score Point 1**

This response shows an incorrect equation for the given line, but a correct  $y$ -intercept of 6. Therefore, this response receives a Score Point 1.

**SCORE POINT 1**

- 3** What is an equation of the line shown on the coordinate plane below?

**Show All Work**

$$m = 2/1 \quad y = mx + b$$
$$b = 6$$

Equation            $y = 2x + 6$

### SCORE POINT 0

**3** What is an equation of the line shown on the coordinate plane below?

**Show All Work**

$$\begin{array}{r} (2, 2) \quad \frac{2}{\times 1} \\ (1, 4) \quad \frac{2}{\times 4} \\ \hline \frac{2}{2}, \frac{8}{8} \end{array}$$

Equation  $2x + 8y = \frac{1}{2}$

### Test 1—Question 3 Score Point 0

This response shows an incorrect equation. The student does not show a correct slope, a correct y-intercept, or a correct complete process. Therefore, this response receives a Score Point 0.

### Test 1—Question 4: Problem Solving

- 4** Jeri was given the diagram below of triangle ABC as part of a math project.

On the line below, write an equation that can be used to determine the value of  $x$ .

Equation \_\_\_\_\_

What is the measure, in degrees, of each of the angles? Write your answers on the lines below.

**Show All Work**

Angle A = \_\_\_\_\_°

Angle B = \_\_\_\_\_°

Angle C = \_\_\_\_\_°

### Exemplary Response:

- $4x - 20 = 180$

OR

- $(2x + 1) + (x - 17) + (x - 4) = 180$

OR

- Other valid equation

AND

- Angle A =  $33^\circ$ , Angle B =  $101^\circ$ , Angle C =  $46^\circ$

AND

- Correct complete process

Sample Process:

- $(2x + 1) + (x - 17) + (x - 4) = 180$

$$4x - 20 = 180$$

$$4x = 200$$

$$x = 50$$

$$m\angle A = x - 17 = 50 - 17 = 33^\circ$$

$$m\angle B = 2x + 1 = 2(50) + 1 = 101^\circ$$

$$m\angle C = x - 4 = 50 - 4 = 46^\circ$$

OR

- Other valid process

### Rubric:

**3 points** Exemplary response

**2 points** Two correct components

**1 point** One correct component

**0 points** Other

**NOTE:** Award credit for a correct complete process with an error in computation.

Award a maximum of 1 point for a completely incorrect equation solved correctly, and then applied correctly to all 3 angles.

Award a maximum of 2 points for an equation showing the sum of the 3 angles set equal to a value other than 180, then solved correctly, and finally applied correctly to all 3 angles.

Correct complete process is defined as solving the equation for  $x$  and then applying that value of  $x$  to at least 1 angle.

**Test 1—Question 4**  
**Score Point 3**

This response matches the exemplary response contained in the rubric. The student shows a correct equation and correct answers of  $33^\circ$ ,  $101^\circ$ , and  $46^\circ$ . A correct complete process for finding the angles is shown. The response receives a Score Point 3.

**SCORE POINT 3**

- 4** Jeri was given the diagram below of triangle ABC as part of a math project.

On the line below, write an equation that can be used to determine the value of  $x$ .

Equation  $2x + 1 + x - 17 + x - 4 = 180$

What is the measure, in degrees, of each of the angles? Write your answers on the lines below.

**Show All Work**

$$4x - 20 = 180$$

$$4x = 200$$

$$x = 50$$

Angle A = 33°

Angle B = 101°

Angle C = 46°

## SCORE POINT 2

- 4** Jeri was given the diagram below of triangle ABC as part of a math project.

On the line below, write an equation that can be used to determine the value of  $x$ .

Equation            $4x - 20 = 180$           

What is the measure, in degrees, of each of the angles? Write your answers on the lines below.

**Show All Work**

$4x - 20 = 180$	$40$	$80$	$40$
$4x = 160$	$\frac{-17}{23}$	$\frac{+ 1}{81}$	$\frac{- 4}{36}$
$x = 40$			

Angle A =           23          °

Angle B =           81          °

Angle C =           36          °

## Test 1—Question 4 Score Point 2

This response shows a correct equation, but a computational error results in incorrect answers for the three angles. The computational error occurs when the student adds 20 and 180 and gets 160 instead of 200. However, the student correctly applies the incorrect value of  $x$  to all three angles. Therefore, this response receives a Score Point 2.

**Test 1—Question 4**  
**Score Point 1**

This response shows a correct equation, but an incorrect process results in incorrect answers for the three angles. The student uses a different equation to incorrectly solve for each angle. Therefore, this response receives a Score Point 1.

**SCORE POINT 1**

- 4** Jeri was given the diagram below of triangle ABC as part of a math project.

On the line below, write an equation that can be used to determine the value of  $x$ .

Equation  $x - 17 + 2x + 1 + x - 4 = 180^\circ$

What is the measure, in degrees, of each of the angles? Write your answers on the lines below.

**Show All Work**

$$\begin{array}{r} x - 17 = 180 \\ + 17 \quad +17 \\ \hline x = 197 \end{array}$$

$$\begin{array}{r} x - 4 = 180 \\ +4 \quad +4 \\ \hline x = 184 \end{array}$$

$$\begin{array}{r} 2x + 1 = 180 \\ -1 \quad -1 \\ \hline \end{array}$$

$$\begin{array}{r} \frac{2x}{2} = \frac{179}{2} \\ \hline x = 89.1 \end{array}$$

Angle A = 197°

Angle B = 89°

Angle C = 184°

$$\begin{array}{r} 89.1 \\ 2 \overline{)179} \\ \underline{-16} \phantom{0} \\ 19 \\ \underline{18} \\ 1 \end{array}$$

**SCORE POINT 0**

- 4** Jeri was given the diagram below of triangle ABC as part of a math project.

On the line below, write an equation that can be used to determine the value of  $x$ .

Equation            $y = mx + b$           

What is the measure, in degrees, of each of the angles? Write your answers on the lines below.

**Show All Work**

$$y = x - 17$$

$$y = 2x + 1$$

$$y = x - 4$$

Angle A =       18      °

Angle B =       30      °

Angle C =       4      °

**Test 1—Question 4  
Score Point 0**

This response shows an incorrect equation and an incorrect process. The student sets each expression for the angle measures equal to  $y$  and does not show a process for finding the angle measures. Therefore, this response receives a Score Point 0.

### Test 1—Question 5: Algebra and Functions

**5** Solve:  $\frac{5x + 2}{6x - 3} = \frac{2}{3}$

**Show All Work**

**Answer**  $x =$  \_\_\_\_\_

#### Exemplary Response:

- $x = -4$

Sample Process:

- $\frac{5x + 2}{6x - 3} = \frac{2}{3}$

$$15x + 6 = 12x - 6$$

$$3x = -12$$

$$x = -4$$

OR

- Other valid process

#### Rubric:

<b>2 points</b>	Exemplary response
<b>1 point</b>	Correct complete process; error in computation
<b>0 points</b>	Other

**SCORE POINT 2**

**5** Solve:  $\frac{5x + 2}{6x - 3} = \frac{2}{3}$

**Show All Work**

$$\begin{aligned}\frac{5x + 2}{6x - 3} &= \frac{2}{3} \\ 15x + 6 &= 12x - 6 \\ 3x &= -12 \\ x &= -4\end{aligned}$$

**Answer**  $x =$  -4**Test 1—Question 5  
Score Point 2**

This response matches the exemplary response contained in the rubric. The student shows the correct answer of -4. A correct complete process is shown, but is not required. The response receives a Score Point 2.

**SCORE POINT 1**

**5** Solve:  $\frac{5x + 2}{6x - 3} = \frac{2}{3}$

**Show All Work**

$$\frac{5x + 2}{6x - 3} = \frac{2}{3}$$

$$\begin{aligned}2(6x - 3) &= 3(5x + 2) \\ 12x - 6 &= 15x + 6 \\ -12x &\quad -12x \\ \hline -6 &= 3x + 6 \\ -6 &\quad -6 \\ \hline -12 &= 3x \\ \frac{-12}{3} &= \frac{3x}{3} \quad x = -6\end{aligned}$$

**Answer**  $x =$  -6**Test 1—Question 5  
Score Point 1**

This response shows a correct complete process. However, a computational error is made when the student divides -12 by 3. Therefore, the response receives a Score Point 1.

**SCORE POINT 0**

**5** Solve:  $\frac{5x + 2}{6x - 3} = \frac{2}{3}$

**Show All Work**

$$\begin{array}{ll} 5x + 2 = 2 & 6x - 3 = 3 \\ 5x = 0 & 6x = 6 \\ x = 0 & x = 1 \end{array}$$

**Answer**  $x =$  0, 1**Test 1—Question 5  
Score Point 0**

This response shows an incorrect process resulting in an incorrect answer. The student gets two incorrect answers by creating and solving two equations. Therefore, this response receives a Score Point 0.

### Test 1—Question 6: Problem Solving

- 6** A thin piece of wire 37.2 centimeters long is bent into the shape of a rectangle. The length of the rectangle is twice the width of the rectangle. What are the length and width, in centimeters, of the rectangle?

**Show All Work**

**Length** \_\_\_\_\_ centimeters, **Width** \_\_\_\_\_ centimeters

#### Exemplary Response:

- Length 12.4 centimeters, Width 6.2 centimeters
- AND
- Correct complete process

Sample Process:

$$\bullet \quad 2L + 2W = 37.2$$

$$L = 2W$$

$$2(2W) + 2W = 37.2$$

$$6W = 37.2$$

$$W = 6.2$$

$$L = 2W$$

$$L = 12.4$$

OR

- Other valid process

**NOTE:** Award 1 point if the length and the width are switched.

#### Rubric:

- |                 |  |

**SCORE POINT 2**

- 6** A thin piece of wire 37.2 centimeters long is bent into the shape of a rectangle. The length of the rectangle is twice the width of the rectangle. What are the length and width, in centimeters, of the rectangle?

**Show All Work**

$$w + w + 2w + 2w = 37.2$$

$$6w = 37.2$$

$$w = 6.2$$

**Length** 12.4 centimeters, **Width** 6.2 centimeters

$$\begin{array}{r} 6.2 \\ 6 \overline{) 37.2} \\ \underline{36} \\ 1.2 \end{array}$$

$$6.2$$

$$\times 2$$

$$12.4$$

**Test 1—Question 6  
Score Point 2**

This response matches the exemplary response contained in the rubric. The student correctly determines the length, 12.4 centimeters, and the width, 6.2 centimeters. A correct complete process is shown. The response receives a Score Point 2.

**SCORE POINT 1**

- 6** A thin piece of wire 37.2 centimeters long is bent into the shape of a rectangle. The length of the rectangle is twice the width of the rectangle. What are the length and width, in centimeters, of the rectangle?

**Show All Work**

$$12.4$$

$$6.2$$

**Length** 12.4 centimeters, **Width** 6.2 centimeters

**Test 1—Question 6  
Score Point 1**

This response shows the correct answers for the length and the width. However, there is no process shown. Therefore, this response receives a Score Point 1.

**Test 1—Question 6**  
**Score Point 0**

This response shows incorrect answers for the length and width and an incorrect process. The student divides the length of the wire by 2 to find an incorrect length of the rectangle. The student then doubles that value to find an incorrect width. Therefore, this response receives a Score Point 0.

**SCORE POINT 0**

- 6** A thin piece of wire 37.2 centimeters long is bent into the shape of a rectangle. The length of the rectangle is twice the width of the rectangle. What are the length and width, in centimeters, of the rectangle?

**Show All Work**

**Length** 18.6 centimeters, **Width** 37.2 centimeters

## Test 1—Question 7: Data Analysis and Probability

- 7** The Sanders family took a 4-day Hawaiian cruise. Ms. Sanders recorded the nautical miles the ship traveled each day, as shown on the graph below.

On one of the days, the family traveled a total of 105 nautical miles from Kahului, Maui to Hilo, Hawaii. Which day did the Sanders family sail from Kahului to Hilo?

**Answer** \_\_\_\_\_

On the lines below, explain on which day the Sanders family traveled the LEAST distance. Be sure to use values from the graph to justify your explanation.

---

---

---

---

**Exemplary Response:**

- 3

AND

Explanation equivalent to the following:

- They traveled the least distance on the first day because they traveled less than 100 miles. Days 2, 3, and 4 were all greater than 100 miles.

OR

- Other valid explanation

**Rubric:**

<b>2 points</b>	Exemplary response
<b>1 point</b>	One correct component
<b>0 points</b>	Other

## SCORE POINT 2

- 7** The Sanders family took a 4-day Hawaiian cruise. Ms. Sanders recorded the nautical miles the ship traveled each day, as shown on the graph below.

On one of the days, the family traveled a total of 105 nautical miles from Kahului, Maui to Hilo, Hawaii. Which day did the Sanders family sail from Kahului to Hilo?

**Answer** day 3

On the lines below, explain on which day the Sanders family traveled the LEAST distance. Be sure to use values from the graph to justify your explanation.

Day 1 because if you look at the distance from day one,  
they don't even travel 100 nautical miles. The rest of the  
days they travel over 100 nautical miles.

## Test 1—Question 7 Score Point 2

This response matches the exemplary response contained in the rubric. The student shows the correct answer of 3 and gives a valid explanation. The response receives a Score Point 2.

**Test 1—Question 7**  
**Score Point 1**

This response shows the correct answer. However, the student gives an incomplete explanation for why the Sanders family traveled the least on Day 1. The student does not compare the distance traveled on Day 1 with the other days. Therefore, this response receives a Score Point 1.

**SCORE POINT 1**

- 7** The Sanders family took a 4-day Hawaiian cruise. Ms. Sanders recorded the nautical miles the ship traveled each day, as shown on the graph below.

On one of the days, the family traveled a total of 105 nautical miles from Kahului, Maui to Hilo, Hawaii. Which day did the Sanders family sail from Kahului to Hilo?

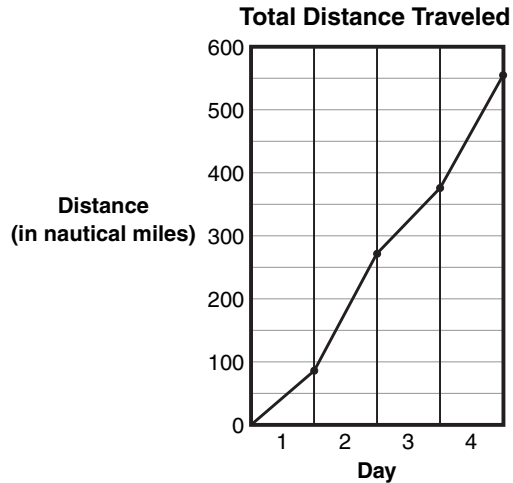

**Answer** Day 3

On the lines below, explain on which day the Sanders family traveled the LEAST distance. Be sure to use values from the graph to justify your explanation.

The Sanders family traveled the least on day one. They  
only traveled about one hundred nautical miles.

### SCORE POINT 0

- 7** The Sanders family took a 4-day Hawaiian cruise. Ms. Sanders recorded the nautical miles the ship traveled each day, as shown on the graph below.

On one of the days, the family traveled a total of 105 nautical miles from Kahului, Maui to Hilo, Hawaii. Which day did the Sanders family sail from Kahului to Hilo?

**Answer** 604 miles

On the lines below, explain on which day the Sanders family traveled the LEAST distance. Be sure to use values from the graph to justify your explanation.

The way you get the answer is by adding.

---

---

---

---

### Test 1—Question 7 Score Point 0

This response shows an incorrect answer and an incorrect explanation. Therefore, this response receives a Score Point 0.

## Test 1—Question 8: Algebra and Functions

**8** Read the statement below.

For all rational numbers, the equation  $y = x^2$  produces negative values for  $y$ .

On the line below, write a value of  $x$  that makes the statement TRUE. Write “not possible” if there are no values of  $x$  that make the statement true.

**Answer** \_\_\_\_\_

On the line below, write a value of  $x$  that makes the statement FALSE. Write “not possible” if there are no values of  $x$  that make the statement false.

**Answer** \_\_\_\_\_

Is the statement true for all values of  $x$ , some values of  $x$ , or no values of  $x$ ?

**Answer** \_\_\_\_\_

### Exemplary Response:

- True: Not possible
- AND
- False: Any rational number
- AND
- No values of  $x$

### Rubric:

- |                 |                        |
|-----------------|------------------------|
| <b>2 points</b> | Exemplary response     |
| <b>1 point</b>  | Two correct components |
| <b>0 points</b> | Other                  |

## SCORE POINT 2

**8** Read the statement below.

For all rational numbers, the equation  $y = x^2$  produces negative values for  $y$ .

On the line below, write a value of  $x$  that makes the statement TRUE. Write "not possible" if there are no values of  $x$  that make the statement true.

Answer Not Possible

On the line below, write a value of  $x$  that makes the statement FALSE. Write "not possible" if there are no values of  $x$  that make the statement false.

Answer -2

Is the statement true for all values of  $x$ , some values of  $x$ , or no values of  $x$ ?

Answer no values of  $x$

## Test 1—Question 8 Score Point 2

This response matches the exemplary response contained in the rubric. The student shows the correct answers of "not possible," "-2," and "no values of  $x$ ." The response receives a Score Point 2.

**Test 1—Question 8**  
**Score Point 1**

This response shows two correct answers. The student does not give a value of  $x$  that makes the statement false. Therefore, this response receives a Score Point 1.

**SCORE POINT 1**

**8** Read the statement below.

For all rational numbers, the equation  $y = x^2$  produces negative values for  $y$ .

On the line below, write a value of  $x$  that makes the statement TRUE. Write “not possible” if there are no values of  $x$  that make the statement true.

Answer not possible

On the line below, write a value of  $x$  that makes the statement FALSE. Write “not possible” if there are no values of  $x$  that make the statement false.

Answer  $y = x^2$   $y$  can't equal  $= x^2$

Is the statement true for all values of  $x$ , some values of  $x$ , or no values of  $x$ ?

Answer no values of  $x$

**SCORE POINT 0**

**8** Read the statement below.

For all rational numbers, the equation  $y = x^2$  produces negative values for  $y$ .

On the line below, write a value of  $x$  that makes the statement TRUE. Write "not possible" if there are no values of  $x$  that make the statement true.

Answer            $y = -x^2$           

On the line below, write a value of  $x$  that makes the statement FALSE. Write "not possible" if there are no values of  $x$  that make the statement false.

Answer           "not possible"          

Is the statement true for all values of  $x$ , some values of  $x$ , or no values of  $x$ ?

Answer           yes          

**Test 1—Question 8  
Score Point 0**

This response shows three incorrect answers. Therefore, this response receives a Score Point 0.

## Test 2—Question 1: Measurement

1

A snail can travel at a rate of 0.28 centimeter per second.

How many MINUTES will the snail take to travel 7 METERS?

Show All Work

Answer \_\_\_\_\_ minutes

### Exemplary Response:

- 41.7 minutes

Sample Process:

$$\begin{aligned} & \bullet 7\text{m} \times \frac{100\text{ cm}}{1\text{ m}} \times \frac{1\text{ sec}}{0.28\text{ cm}} \times \frac{1\text{ min}}{60\text{ sec}} \\ & = 41.\overline{6} \approx 41.7\text{ minutes} \end{aligned}$$

OR

- Other valid process

### Rubric:

**2 points** Exemplary response

**1 point** Correct process for determining the total number of seconds

OR

Correct process for determining the centimeters per minute and total centimeters traveled

OR

Correct process for determining  $\frac{1}{60}$  of the total centimeters traveled

**0 points** Other

### SCORE POINT 2

1

A snail can travel at a rate of 0.28 centimeter per second.

How many MINUTES will the snail take to travel 7 METERS?

Show All Work

$$\begin{array}{r}
 \frac{.28 \text{ cm}}{1 \text{ sec}} \quad \frac{60 \text{ sec}}{1 \text{ min}} \quad \frac{16.8 \text{ cm}}{1 \text{ min}} \quad \frac{1 \text{ m}}{100 \text{ cm}} \\
 \\
 \frac{16.8 \text{ cm}}{100 \text{ m}} \\
 \\
 \frac{0.168 \text{ m}}{1 \text{ min}}
 \end{array}$$

Answer 41.66 minutes

### Test 2—Question 1 Score Point 2

This response matches the exemplary response contained in the rubric. The student shows the correct answer of 41.66 minutes. A correct complete process is shown, but not required. The response receives a Score Point 2.

### SCORE POINT 1

1

A snail can travel at a rate of 0.28 centimeter per second.

How many MINUTES will the snail take to travel 7 METERS?

Show All Work

$$\begin{array}{r}
 .28x = 700 \\
 x = 2500
 \end{array}
 \quad
 \begin{array}{r}
 7 \text{ m} \times \frac{100 \text{ cm}}{1 \text{ m}} = 700 \text{ cm}
 \end{array}$$

Answer 2500 minutes

### Test 2—Question 1 Score Point 1

This response shows a correct process for determining the total number of seconds. However, the student does not convert the seconds to minutes. Therefore, this response receives a Score Point 1.

**Test 2—Question 1**  
**Score Point 0**

This response shows an incorrect answer and an incorrect process. Therefore, this response receives a Score Point 0.

**SCORE POINT 0**

**1**

A snail can travel at a rate of 0.28 centimeter per second.

How many MINUTES will the snail take to travel 7 METERS?

**Show All Work**

$$60 \times 7 = 420$$

**Answer** 420 minutes

## Test 2—Question 2: Geometry

- 2** Look at the side view of the stairs shown below.

What is the height ( $x$ ), in inches, of one stair?

**Show All Work**

**Answer** \_\_\_\_\_ inches

### Exemplary Response:

- 8 inches

Sample Process:

- $a^2 + b^2 = c^2$   
 $15^2 + b^2 = 17^2$   
 $225 + b^2 = 289$   
 $b^2 = 64$   
 $b = 8$

OR

- Other valid process

### Rubric:

<b>2 points</b>	Exemplary response
<b>1 point</b>	Correct complete process; error in computation
<b>0 points</b>	Other

**Test 2—Question 2**  
**Score Point 2**

This response matches the exemplary response contained in the rubric. The student shows the correct answer of 8 inches. A correct complete process is shown, but not required. The response receives a Score Point 2.

**SCORE POINT 2**

**2** Look at the side view of the stairs shown below.

What is the height ( $x$ ), in inches, of one stair?

**Show All Work**

$$\begin{aligned} a^2 + b^2 &= c^2 \\ a^2 + 15^2 &= 17^2 \\ a^2 + 225 &= 289 \\ -225 \quad -225 & \\ \hline a^2 &= 64 \\ a &= 8 \end{aligned}$$

**Answer** 8 inches

**SCORE POINT 1**

- 2** Look at the side view of the stairs shown below.

What is the height ( $x$ ), in inches, of one stair?

**Show All Work**

$$\begin{aligned}a^2 + b^2 &= c^2 \\a^2 + 15^2 &= 17^2 \\a^2 + 225 &= 289 \\\sqrt{a^2} &= \sqrt{514} \\a &= 22.7\end{aligned}$$

**Answer** 22.7 inches

**Test 2—Question 2  
Score Point 1**

This response shows a correct complete process. However, an error is made in isolating  $a^2$  that results in an incorrect answer. Therefore, this response receives a Score Point 1.

**Test 2—Question 2**  
**Score Point 0**

This response shows an incomplete process resulting in an incorrect answer. The student does not take the square root of 64. Therefore, this response receives a Score Point 0.

**SCORE POINT 0**

**2** Look at the side view of the stairs shown below.

What is the height ( $x$ ), in inches, of one stair?

**Show All Work**

$$a^2 + 15^2 = 17^2$$

$$a^2 + 225 = 289$$

$$\begin{array}{r} -225 \end{array}$$

$$\begin{array}{r} -225 \\ \hline 64 \end{array}$$

**Answer** 64 inches

## Test 2—Question 3: Problem Solving

- 3** The table below shows Paul's score for his first four bowling games.

**Paul's Bowling Games**

Game	Score
1	120
2	110
3	80
4	80

Paul believes he can raise his mean bowling score to 140 after bowling one more game. The highest possible score for one game is 300. On the lines below, explain why Paul is correct or incorrect. Be sure to include what his highest possible mean score could be when justifying your answer.

---

---

---

---

---

### Exemplary Response:

Explanation equivalent to the following:

- Paul is incorrect because getting the maximum score of 300 would make his mean score  $\frac{690}{5} = 138$ , so the highest his mean score could be is 138, not 140.

OR

- Other valid explanation

AND

- Correct maximum mean of 138

### Rubric:

- |                 |  |
|-----------------|--|
| <b>2 points</b> | Exemplary response   |
| <b>1 point</b>  | Correct conclusion based on correct complete process; error in computation<br>OR<br>Valid explanation without correct maximum mean of 138<br>OR<br>Correct maximum mean only |
| <b>0 points</b> | Other  |

**Test 2—Question 3**  
**Score Point 2**

This response matches the exemplary response contained in the rubric. The student shows a correct explanation for why Paul's claim is not correct. The response receives a Score Point 2.

**SCORE POINT 2**

- 3** The table below shows Paul's score for his first four bowling games.

**Paul's Bowling Games**

Game	Score
1	120
2	110
3	80
4	80

Paul believes he can raise his mean bowling score to 140 after bowling one more game. The highest possible score for one game is 300. On the lines below, explain why Paul is correct or incorrect. Be sure to include what his highest possible mean score could be when justifying your answer.

Incorrect. Because if you add  $120 + 110 + 80 + 80 + 300$   
you get 690. Then if you divide that by 5. Paul would only  
have an average of 138.

### SCORE POINT 1

- 3** The table below shows Paul's score for his first four bowling games.

$$\begin{array}{r} 120 \\ +110 \\ \hline 230 \\ +80 \\ \hline 310 \\ +80 \\ \hline 390 \end{array}$$

**Paul's Bowling Games**

Game	Score
1	120
2	110
3	80
4	80

Paul believes he can raise his mean bowling score to 140 after bowling one more game. The highest possible score for one game is 300. On the lines below, explain why Paul is correct or incorrect. Be sure to include what his highest possible mean score could be when justifying your answer.

His average now is only 97.5 to raise his average to 140  
he would have to bowl over 300, and 300 is the highest a  
person can get when bowling so he is incorrect, it's  
impossible.

### Test 2—Question 3 Score Point 1

This response shows a correct conclusion, but the explanation is incomplete because the student does not identify the mean score Paul will get if he bowls 300. Therefore, this response receives a Score Point 1.

**Test 2—Question 3**  
**Score Point 0**

This response shows an incorrect explanation. The student does not correctly explain how to determine the mean score. Therefore, this response receives a Score Point 0.

**SCORE POINT 0**

**3** The table below shows Paul’s score for his first four bowling games.

**Paul’s Bowling Games**

Game	Score
1	120
2	110
3	80
4	80

Paul believes he can raise his mean bowling score to 140 after bowling one more game. The highest possible score for one game is 300. On the lines below, explain why Paul is correct or incorrect. Be sure to include what his highest possible mean score could be when justifying your answer.

True because if you add those numbers plus 300 and  
divide by 5 you are pretty close to 140.

## Test 2—Question 4: Problem Solving

4

John is going to walk to his house and arrive there at 5:00 P.M. He will walk diagonally across a field to his house, as shown in the diagram below.

John walks at a rate of 80 meters per minute.

At what time does John have to start walking to his house so he will arrive there at 5:00 P.M.?

**Show All Work**

**Answer** \_\_\_\_\_ P.M.

### Exemplary Response:

- 4:47 P.M.

AND

- Correct complete process

Sample Process:

- Length of John's path, (x):

$$x^2 = 400^2 + 960^2$$

$$x^2 = 1,081,600$$

$$x = 1,040 \text{ meters}$$

Time to walk home:

$$\text{time} = \frac{1,040}{80} = 13 \text{ minutes}$$

$$5:00 \text{ P.M.} - 13 \text{ minutes} = 4:47 \text{ P.M.}$$

OR

- Other valid process

### Rubric:

<b>3 points</b>	Exemplary response
<b>2 points</b>	Correct answer only OR Correct complete process; error in computation
<b>1 point</b>	Correct process for determining amount of time it will take to walk
<b>0 points</b>	Other

### SCORE POINT 3

4

John is going to walk to his house and arrive there at 5:00 P.M. He will walk diagonally across a field to his house, as shown in the diagram below.

John walks at a rate of 80 meters per minute.

At what time does John have to start walking to his house so he will arrive there at 5:00 P.M.?

**Show All Work**

$$a^2 + b^2 = c^2$$

$$400^2 + 960^2 = c^2$$

$$160,000 + 921,600 = c^2$$

$$\sqrt{1,081,600} = \sqrt{c^2}$$

$$1,040 \text{ meters}$$

$$t = \frac{d}{r}$$

$$t = \frac{1040 \text{ m}}{80 \text{ mpm}}$$

$$t = 13 \text{ mins}$$

$$4:47$$

**Answer** 4:47 P.M.

### Test 2—Question 4 Score Point 3

This response matches the exemplary response contained in the rubric. The student shows a correct answer of 4:47 P.M. and a correct complete process. The response receives a Score Point 3.

**Test 2—Question 4**  
**Score Point 2**

This response shows a correct complete process, but a computational error is made that results in an incorrect answer. The student adds 921,600 and 160,000 incorrectly. Therefore, this response receives a Score Point 2.

**SCORE POINT 2**

**4**

John is going to walk to his house and arrive there at 5:00 P.M. He will walk diagonally across a field to his house, as shown in the diagram below.

John walks at a rate of 80 meters per minute.

At what time does John have to start walking to his house so he will arrive there at 5:00 P.M.?

**Show All Work**

$$694 = 80 \cdot t$$

$$t = 8.675$$

$$960^2 + 400^2 = c^2$$

$$921600 + 160,000 = c^2$$

$$\sqrt{481,600} = c$$

$$693.97406 = c$$

**Answer** 4:51 P.M.

## SCORE POINT 1

4

John is going to walk to his house and arrive there at 5:00 P.M. He will walk diagonally across a field to his house, as shown in the diagram below.

John walks at a rate of 80 meters per minute.

At what time does John have to start walking to his house so he will arrive there at 5:00 P.M.?

**Show All Work**

$$a^2 + b^2 = c^2$$

$$960^2 + 400^2 = c^2$$

$$921600 + 160000 = c^2$$

$$\sqrt{1081600} = \sqrt{c^2}$$

$$1040 = c$$

**Answer** 1 P.M.

$$d = rt$$

$$\frac{1040}{80} = \frac{80t}{80}$$

$$13 = t$$

$$13 = 1$$

$$13$$

$$\underline{-12}$$

$$1$$

## Test 2—Question 4 Score Point 1

This response shows a correct process for determining the time it takes John to walk across the field. However, the student does not use the correct process to determine the time John should start walking in order to return to the house at 5 P.M. Therefore, this response receives a Score Point 1.

**Test 2—Question 4**  
**Score Point 0**

This response shows an incorrect answer and an incorrect process. The student finds the time it took to walk 960 meters at a rate of 80 meters per minute. Therefore, this response receives a Score Point 0.

**SCORE POINT 0**

**4**

John is going to walk to his house and arrive there at 5:00 P.M. He will walk diagonally across a field to his house, as shown in the diagram below.

John walks at a rate of 80 meters per minute.

At what time does John have to start walking to his house so he will arrive there at 5:00 P.M.?

**Show All Work**

$$960 \div 80 = 12$$

5:00

00:12

**Answer** 4:48 P.M.

## Test 2—Question 5: Data Analysis and Probability

**5** Look at the graph below.

On the lines below, explain how to use the graph to estimate the price per pound of recycled glass in 1997.

---

---

---

Based on the explanation above, what will be a good estimate of the price per pound of recycled glass in 1997?

**Show All Work**

**Answer** \$ \_\_\_\_\_ per pound

**Exemplary Response:**

Explanation equivalent to the following:

- The rate at which cost for glass per pound has increased is 50 cents per five years, which is \$0.10 per year. In 1995, the cost per pound was \$3.50. Add \$0.20 to get to 1997.

OR

- Other valid explanation

AND

- Answer in the range of \$3.60 to \$3.80 per pound

**NOTE:** Award credit for correct answer based on incorrect explanation.

**Rubric:**

<b>2 points</b>	Exemplary response
<b>1 point</b>	One correct component
<b>0 points</b>	Other

## SCORE POINT 2

**5** Look at the graph below.

On the lines below, explain how to use the graph to estimate the price per pound of recycled glass in 1997.

Draw a line to connect the dots figure where 1997 would  
lie on the graph and draw a straight line till it intercepts  
the dotted line. where the line intercepts draw a horizontal  
line to the prices.

Based on the explanation above, what will be a good estimate of the price per pound of recycled glass in 1997 ?

**Show All Work**

**Answer** \$ 3.75 per pound

## Test 2—Question 5 Score Point 2

This response matches the exemplary response contained in the rubric. The student shows a correct explanation and an answer in the range of \$3.60 to \$3.80 per pound. The response receives a Score Point 2.

### Test 2—Question 5 Score Point 1

This response shows a correct answer in the range of \$3.60 to \$3.80 per pound. However, the student gives an incorrect explanation. The student does not describe a method to estimate the price per pound of recycled glass in 1997. Therefore, this response receives a Score Point 1.

#### SCORE POINT 1

**5** Look at the graph below.

On the lines below, explain how to use the graph to estimate the price per pound of recycled glass in 1997.

When you graph you look at your information and  
determine where you want to graph it.

Based on the explanation above, what will be a good estimate of the price per pound of recycled glass in 1997?

**Show All Work**

**Answer** \$ 3.75 per pound

## SCORE POINT 0

**5** Look at the graph below.

On the lines below, explain how to use the graph to estimate the price per pound of recycled glass in 1997.

Look at 1995 because that's the closest year on the graph  
to 1997. It is \$3.50 a year and each year it goes up 50¢,  
so you need to add \$1.00 to it.

Based on the explanation above, what will be a good estimate of the price per pound of recycled glass in 1997?

**Show All Work**

$$\begin{array}{r} \$3.50 \\ + 1.00 \\ \hline \$4.50 \end{array}$$

**Answer** \$ 4.50 per pound

## Test 2—Question 5 Score Point 0

This response shows an incorrect explanation and an incorrect answer. Therefore, this response receives a Score Point 0.

## Test 2—Question 6: Measurement

6

Jeannine stores items in a safe. The inside of the safe is in the shape of a rectangular prism. A diagram of the inside of the safe is shown below.

What is the volume, in cubic inches, of the safe?

**Show All Work**

**Answer** \_\_\_\_\_ cubic inches

### Exemplary Response:

- 913.5 cubic inches

Sample Process:

- $\text{Volume} = lwh$   
 $= (18)(14.5)(3.5)$   
 $= 913.5$

OR

- Other valid process

### Rubric:

<b>2 points</b>	Exemplary response
<b>1 point</b>	Correct complete process; error in computation
<b>0 points</b>	Other

## SCORE POINT 2

6

Jeannine stores items in a safe. The inside of the safe is in the shape of a rectangular prism. A diagram of the inside of the safe is shown below.

What is the volume, in cubic inches, of the safe?

**Show All Work**

$$\begin{aligned} V &= lwh \\ 14.5 (3.5) (18) \\ 50.75 (18) \\ 913.5 \text{ in}^3 \end{aligned}$$

**Answer** 913.5 cubic inches

## Test 2—Question 6 Score Point 2

This response matches the exemplary response contained in the rubric. The student shows the correct answer of 913.5 cubic inches. A correct process for determining the volume is shown, but not required. The response receives a Score Point 2.

**Test 2—Question 6**  
**Score Point 1**

This response shows a correct complete process, but an incorrect answer of 9135 instead of 913.5 is shown. Therefore, this response receives a Score Point 1.

**SCORE POINT 1**

**6**

Jeannine stores items in a safe. The inside of the safe is in the shape of a rectangular prism. A diagram of the inside of the safe is shown below.

What is the volume, in cubic inches, of the safe?

**Show All Work**

$$18 \times 14.5 \times 3.5$$

**Answer** 9135 cubic inches

**SCORE POINT 0****6**

Jeannine stores items in a safe. The inside of the safe is in the shape of a rectangular prism. A diagram of the inside of the safe is shown below.

What is the volume, in cubic inches, of the safe?

**Show All Work**

rectangular Prism

$$V = lwh$$

$$V = 14.5 (3.5) 18$$

$$18 (18) = 324$$

**Answer** 324 cubic inches

**Test 2—Question 6  
Score Point 0**

This response shows an incorrect answer and an incorrect process. The student adds 14.5 and 3.5 instead of multiplying. Therefore, this response receives a Score Point 0.

## Test 2—Question 7: Problem Solving

7

Eva is planning to visit her brother who lives 330 miles away. She wants to determine whether it would be quicker for her to fly or drive. The table below shows the times associated with her trip if she chooses to fly.

### Flying

Event	Amount of Time (in hours and minutes)
Drive to airport	1:50
Time at airport	2:00
Flight time	1:05
Baggage pickup	0:45
Drive from airport to brother's	0:40

If Eva drives to her brother's she can travel at a mean speed of 60 miles per hour.

Which type of transportation would take less time, and how much time would she save by choosing that type of transportation?

### Show All Work

Type of transportation \_\_\_\_\_, Time saved \_\_\_\_\_

### Exemplary Response:

- car and 0:50
- AND
- Correct complete process

Sample Process:

- Flying time:  
 $1:50 + 2:00 + 1:05 + 0:45 + 0:40 = 6:20$

Driving time:

$$d = rt$$

$$t = \frac{d}{r}$$
$$= \frac{330}{60}$$

$$= 5.5 \text{ hours}$$

$$= 5 \text{ hours } 30 \text{ minutes}$$

Time saved:

$$6:20 - 5:30 = 0:50$$

OR

- Other valid process

**NOTE:** Award 1 point for an incorrect conclusion based on a correct process without computational errors.

### Rubric:

<b>3 points</b>	Exemplary response
<b>2 points</b>	Correct answer only OR Correct complete process; error in computation
<b>1 point</b>	Correct process for finding times for both flying and driving with conversion errors
<b>0 points</b>	Other

## Test 2—Question 7

### Score Point 3

This response matches the exemplary response contained in the rubric. The student shows "Drive" for the type of transportation, "50 minutes" for the time saved, and a correct complete process. The response receives a Score Point 3.

### SCORE POINT 3

**7**

Eva is planning to visit her brother who lives 330 miles away. She wants to determine whether it would be quicker for her to fly or drive. The table below shows the times associated with her trip if she chooses to fly.

#### Flying

Event	Amount of Time (in hours and minutes)
Drive to airport	1:50
Time at airport	2:00
Flight time	1:05
Baggage pickup	0:45
Drive from airport to brother's	0:40

If Eva drives to her brother's she can travel at a mean speed of 60 miles per hour.

Which type of transportation would take less time, and how much time would she save by choosing that type of transportation?

#### Show All Work

$$60 \overline{) 330} \quad 5.5 \text{ hrs.}$$

$$D = R \cdot T$$

Drive

## Test 2—Question 7 Score Point 2

This response shows one correct answer and a correct complete process, but a computational error results in an incorrect answer for the time saved. The computational error is made when the student adds the times for flying. Therefore, this response receives a Score Point 2.

## Test 2—Question 7

### Score Point 1

This response shows a correct process, but a conversion error results in an incorrect answer of 1 hour and 30 minutes for time saved. Therefore, this response receives a Score Point 1.

### SCORE POINT 1

7

**SCORE POINT 0****7**

Eva is planning to visit her brother who lives 330 miles away. She wants to determine whether it would be quicker for her to fly or drive. The table below shows the times associated with her trip if she chooses to fly.

**Flying**

Event	Amount of Time (in hours and minutes)
Drive to airport	1:50
Time at airport	2:00
Flight time	1:05
Baggage pickup	0:45
Drive from airport to brother's	0:40

If Eva drives to her brother's she can travel at a mean speed of 60 miles per hour.

Which type of transportation would take less time, and how much time would she save by choosing that type of transportation?

**Show All Work**

$$\begin{array}{r} 4:00 + :50 + :50 + :40 \\ \hline 5:40 + :40 \\ \hline 6:20 \end{array}$$

Type of transportation flight, Time saved 4hrs

**Test 2—Question 7  
Score Point 0**

This response shows an incorrect answer and an incomplete process. The student does not find the time it takes to drive. Therefore, this response receives a Score Point 0.

## Test 2—Question 8: Algebra and Functions

- 8** Simone is renting a moving van. The cost of renting a moving van is \$32.50 per day plus \$0.35 for each mile that the moving van is driven. Simone figures that the cost of using a moving van for one day will be \$42.30. How many miles does she plan on driving the moving van?

**Show All Work**

**Answer** \_\_\_\_\_ miles

### Exemplary Response:

- 28 miles

Sample Process:

- $\$42.30 = \$32.50d + \$0.35m$   
 $42.30 - 32.50 = 0.35m$   
 $\$9.80 = 0.35m$   
 $m = 28$

OR

- Other valid process

### Rubric:

<b>2 points</b>	Exemplary response
<b>1 point</b>	Correct complete process; error in computation
<b>0 points</b>	Other

**SCORE POINT 2**

- 8** Simone is renting a moving van. The cost of renting a moving van is \$32.50 per day plus \$0.35 for each mile that the moving van is driven. Simone figures that the cost of using a moving van for one day will be \$42.30. How many miles does she plan on driving the moving van?

**Show All Work**

$$42.30 = 32.50 + .35x$$

$$-32.50 \quad -32.50$$

$$\begin{array}{r} 9.8 \\ .35 \end{array} = \begin{array}{r} .35x \\ .35 \end{array}$$

$$28 = x$$

**Answer** 28 miles

**Test 2—Question 8  
Score Point 2**

This response matches the exemplary response contained in the rubric. The student shows the correct answer of 28 miles. A correct complete process is shown, but not required. The response receives a Score Point 2.

**SCORE POINT 1**

- 8** Simone is renting a moving van. The cost of renting a moving van is \$32.50 per day plus \$0.35 for each mile that the moving van is driven. Simone figures that the cost of using a moving van for one day will be \$42.30. How many miles does she plan on driving the moving van?

**Show All Work**

\$32.50 per day

\$0.35 per each mile

$$\begin{array}{r} 31 \\ 42.30 \\ -32.50 \\ \hline 9.70 \end{array}$$

$$\begin{array}{r} 27.71 \\ 35 \overline{)970} \\ \underline{70} \phantom{00} \\ 270 \phantom{00} \\ \underline{245} \phantom{00} \\ 250 \phantom{00} \\ \underline{245} \phantom{00} \\ 50 \end{array}$$

**Answer** 27.71 miles

**Test 2—Question 8  
Score Point 1**

This response shows a correct complete process, but a computational error results in an incorrect answer. The computational error is made when the student subtracts 32.50 from 42.30 incorrectly. Therefore, this response receives a Score Point 1.

**Test 2—Question 8**  
**Score Point 0**

This response shows an incorrect answer and an incomplete process. The student does not divide 9.8 by 0.35 to find the number of miles. Therefore, this response receives a Score Point 0.

**SCORE POINT 0**

- 8** Simone is renting a moving van. The cost of renting a moving van is \$32.50 per day plus \$0.35 for each mile that the moving van is driven. Simone figures that the cost of using a moving van for one day will be \$42.30. How many miles does she plan on driving the moving van?

**Show All Work**

$$\begin{array}{r} 42.30 \\ -32.50 \\ \hline 9.8 \end{array}$$

**Answer** 9.8 miles
